

ASSIGNMENT 2:

Module 3: Control Structures in Python

Task 1: Check if a Number is Even or Odd

Problem Statement: Write a Python program that:

1. Takes an integer input from the user.
2. Checks whether the number is even or odd using an if-else statement.
3. Displays the result accordingly.

Expected Output:

The program should return an output like:

```
Enter a number: 7
7 is an odd number.
```

```
Enter a number: 12
12 is an even number.
```

Task 2: Sum of Integers from 1 to 50 Using a Loop

Problem Statement: Write a Python program that:

1. Uses a **for loop** to iterate over numbers from **1 to 50**.
2. Calculates the **sum** of all integers in this range.

3. Displays the final sum.

Expected Output:

The program should return:

```
python
```

```
The sum of numbers from 1 to 50 is: 1275
```

Submission Instructions:

- Create a **GitHub repository** and upload your Python scripts (.py files).
- Ensure the repository includes a **README.md** file that describes the functionality of your programs.
- Add both **Task 1 and Task 2** scripts in the same repository.
- Submit the **link to your GitHub repository** once uploaded.

Reference:

Follow the **Python course - Module 3: Control Structures in Python** for additional guidelines and examples.

Note:

Please test your project thoroughly and check all the validations and error handling prior to ensure it works as expected before submission.
